

## ABSTRACT

5 A concentrated physical distribution management system to be  
used in the delivery of ordered cargo to a destination is configured as a  
site capable of communicating mutually by using communication  
network lines. The site is provided with a database server. The internal  
processing section of the database server is composed of, at least, a  
shipping instruction processing section for instructing the delivery of the  
ordered cargo to the destination collectively including a physical  
distribution trader, a physical distribution expense calculation processing  
10 section for calculating physical distribution expenses necessary for the  
delivery of the cargo to the destination, and a cargo tracking processing  
section for indicating the delivery status of the cargo. The concentrated  
physical distribution management system manages the cargo so that all  
of shipping instruction concerning the cargo can be transmitted to the  
15 physical distribution trader only by accessing a portal site.
